Judge Johnson Air Monitoring Summary: (Link to Data - https://spaces.hightail.com/space/SHxxS3u51V)

Sampling Date	Activities	Results	Corrective Actions Required
8/10/26-8/12/26 Background Sampling	No work on site. Background sampling completed to evaluate pre-construction ambient conditions.	Health-Based Threshold Value (HBTV) exceeded for antimony at one location, no soil disturbance occurring during sampling. Determined to be background condition at the site.	N/A
8/13-8/17/26 Baseline Sampling	Site preparation/tree clearing.	No exceedances requiring corrective action(s).*	None – background sampling concentration higher than sampling concentration during tree removal
8/27/26 Weekly Sampling	Site preparation/tree clearing	No exceedances requiring corrective action(s).	None
9/4/26 Weekly Sampling	Site preparation/tree clearing	No exceedances requiring corrective action(s).*	None – background sampling concentration higher than sampling concentration during tree removal
9/10/26 Weekly Sampling	Removal and disposal of asphalt and concrete. Tree clearing activities including removal and wood chipping/disposal.	Lead exceedances above the background concentration were identified at 2 locations.	None - lead exceedances were not present in following weekly sampling events. Determined this was an isolated event.
9/16/26 Weekly Sampling	Removal and disposal of asphalt and concrete. Tree clearing activities including removal and wood chipping/disposal.	HBTV exceeded for antimony at one location (PAM1), but the concentration was below the background sampling concentration	None - background sampling concentration higher than weekly sampling concentration
9/24/26 Weekly Sampling	Topsoil clearing and excavation.	No detected concentrations exceeding HBTVs	None.
10/1/26 Weekly Sampling	Excavation cut and fill work on the basin /football field area.	Benzo(a)pyrene exceeded the HBTV in the samples from four locations following dilution/reanalysis. Antimony also exceeded the HBTV at one location but was below background.	None - Benzo(a)pyrene exceedances were not present in subsequent weekly samples.
10/8/26 Weekly Sampling	Cutting and grading in all site sections.	No detected concentrations exceeding HBTVs.	None.
10/14/26 Weekly Sampling	Building retaining wall 1 and continued grading.	Antimony exceeded the HBTV at two locations, but concentrations were below the background concentration.	None –antimony concentrations below background.
10/22/26 Weekly Sampling	Continued building retaining wall 1. Grade the grass practice field and fill the turf field.	Antimony exceeded the HBTV at four locations and lead exceeded the HBTV at one location; concentrations were below the background concentrations.	None– antimony and lead concentrations below sitewide background.
10/27/26 Weekly Sampling	Fill the grass practice filed and continue working on retaining wall 1.	Antimony exceeded the HBTV at three locations, with concentrations below background	None– antimony concentrations below background.

* HBTV exceeded for antimony at one location, but below the background sampling concentration.

Note: October 1 samples were reanalyzed with dilution.
